What is Cream of Tartar?

When the juice which is pressed from grapes for wine-making ferments, the acid of the fruit is crystallized and precipitated. This is collected, refined to absolute purity, and ground to a powder. This is cream of tartar

Fruit acids are among the most wholesome and important constituents of the food of man. They are absolutely requisite to maintain health. In grape cream of tartar there are combined the most useful of leavening agencies and a most healthful food article

This highly refined acid of the grape, or cream of tartar, is the material from which Royal Baking Powder is made. It is many times more expensive than ingredients used in many baking powders, but being healthful in itself, it adds healthfulness to the food instead of degrading it.

> In imitation baking powders poisonous alum is used instead of healthful cream of tartar. Such powders seriously affect the health
